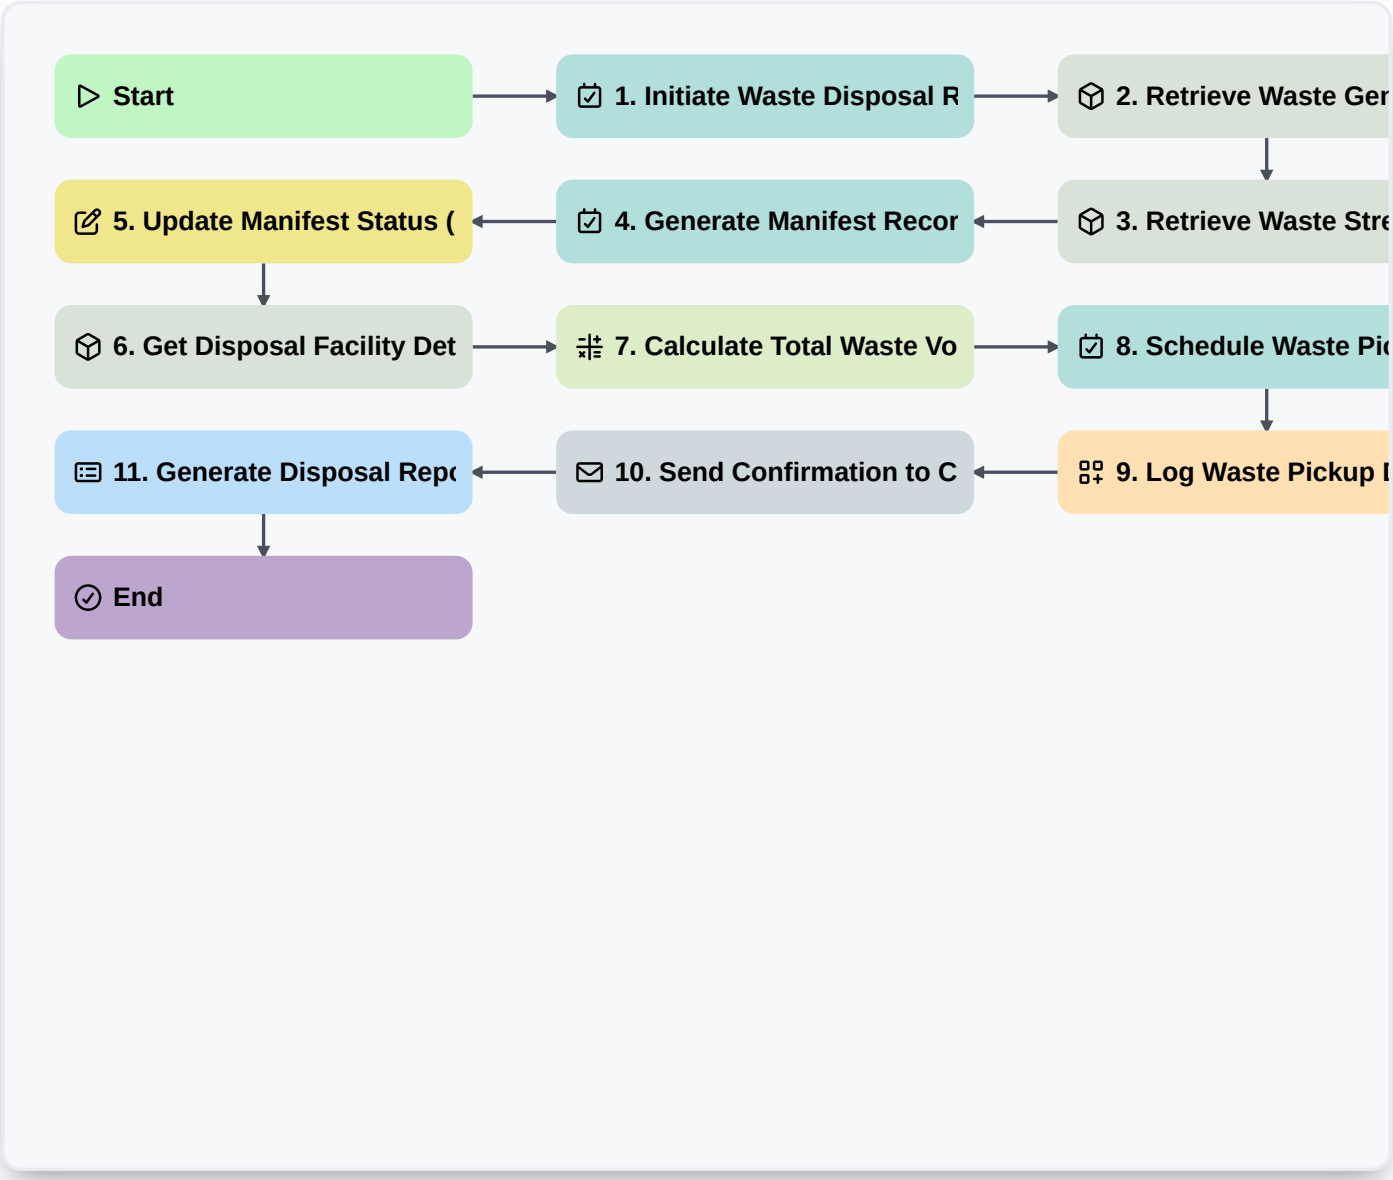
Industrial Waste Manifesting Workflow: Optimize Tracking & Compliance For Waste Management



Start
Start of the Workflow/Process.

1. Initiate Waste Disposal Request
Create initial task for waste generation and disposal authorization.

2. Retrieve Waste Generator Details
Get required information about the waste source/facility.

3. Retrieve Waste Stream Data
Fetch existing data on waste type, volume, and hazard classification.

4. Generate Manifest Record
Create the official waste manifest entry with all necessary data points.

5. Update Manifest Status (e.g., Submitted, Received)
Update the status of the waste manifest as it moves through the process.

6. Get Disposal Facility Details
Look up authorized waste receiving facility information.

7. Calculate Total Waste Volume
Aggregate the total weight/volume from multiple waste streams for billing/reporting.

8. Schedule Waste Pickup Appointment
Create a task to book and confirm scheduled waste pickup.

9. Log Waste Pickup Details
Record actual collection metrics, including date, time, and weight received.

10. Send Confirmation to Client
Automatically email client confirming successful waste transfer and manifest completion.

11. Generate Disposal Report
Automatically generate comprehensive manifest report for auditing and record-keeping.

End
End of the Workflow/Process.
